

Will my Tel2 service work if there is a power cut?

Will my Tel2 service work if there is a power cut?

Your Tel2 service requires power to work as your broadband modem will not function without it.

To ensure that you never lose inbound calls in the case of a power failure, we recommend that you set up call forward unreachable or simultaneous ring on at least one inbound number and have calls sent to a mobile. There are a number of alternative features that you can use also to ensure you always receive calls.
