How do I connect a PBX to Tel2?

PBX Systems

Customers can also connect to Tel2 using their own IP-PBX which is SIP capable and compatible. Asterisk (and it's variants such as FreePBX, Trixbox and others) is the most popular PBX in the market and instructions can be found here on how to connect Asterisk based systems to our service.

Contact us if you have another PBX phone system and want to see if this is compatible with our services.
