

Do Tel2 support SIP Trunking?

Tel2 SIP Trunking is available on all of our plans - or you can choose our 'SIP Trunking Plan' where you can receive 1 free DDI and channel and can then purchase additional DDIs at a low £1.50 each and additional channels at £1 each (sold in blocks of 5 channels). We also allow you to add our mobile bundles to reduce your calling costs

Here are some great reasons why Tel2 SIP Trunking is the best option for your IP PBX PSTN connectivity. Customers have two options when connecting their IP capable PBX to Tel2 - SIP Peering and Registered Trunks. Both services are available on ALL Tel2 accounts and can be configured in [Tel2 Now](#). Simply make the choice that best suits your business requirements.

Please visit our [SIP Trunking page](#) for more information.
